

# LIVE WELL TODAY AND TOMORROW: **HILCONA OPERATES SUSTAINABLY**

**Hilcona Foodservice  
leads by example:**

We respect the environment  
and handle resources with care.

# How we achieve sustainability

- Our electricity is provided from renewable power sources.

- We manufacture with tuna provided from dolphin-safe fishing.

- We use fish from certified sustainable fishing (MSC and ASC).

- We prioritise regional raw materials in our production and apply fair trade standards when dealing with all suppliers

- Fish products from sustainable fishing (WWF Score 1–3).

- All eggs originate from KAT-certified animal husbandry (controlled alternative animal husbandry); we do not use battery farmed eggs.

- Cardboard packaging > 90 % comes from recycled material.

- We discontinued use of palm oil in all new developments in 2014. Our recipes are already 98 % free from palm oil. In the small number of foods containing palm oil, it is certified according to the strict RSPO "segregated".

- All heat generated in our manufacturing in Schaan process is CO<sub>2</sub> neutral. As a result, CO<sub>2</sub> emissions are reduced by 15,000 tons.

- We purchase Swiss vegetables from 350 regional family businesses.

- We do not use any genetically modified organisms.

- We produce tofu exclusively from 100 % Swiss organic soy.

- We have set a goal of saving 30 tons of packaging material per year by taking appropriate measures.

- Whole foods share of sales: 10 %.

- Many of our cheese varieties (Ricotta, Mozzarella, Mascarpone, Gruyère) are produced in Switzerland from Swiss milk.

- 100 % free from genetic modification.

# Quality and Sustainability at Hilcona

## Product quality

We know the current quality requirements and anticipate the future requirements of our stakeholders, aligning our services and products accordingly. We procure the appropriate raw materials and supplies so as to ensure we offer our customers the best quality products

## Process quality

We provide a constant level of performance with efficient, safe and mostly fault-free processes and improve ourselves continuously.

## Structural quality

To achieve and maintain our product and process quality, we have a requirement-oriented infrastructure in place. We employ competent staff with high quality-consciousness and a quality-oriented approach and have established a culture that takes the approach: "A mistake is an opportunity for improvement".

## Sustainability

### ■ Products and procurement

We are committed to products that are produced in an ecologically-compatible, humane and socially responsible manner.

### ■ Environment and resources

We respect the environment and handle resources with care.

### ■ Employees and community

We are a caring employer who is committed to our employees and the community
